

CATARRH BLOOD UNHEALTHY SYSTEM DERANGED

The entire inner portion of the body is covered with mucous membrane; this membranous tissue is abundantly supplied with blood vessels, veins, arteries, and capillaries. Each of these is constantly supplying to this tissue or lining, blood to nourish and strengthen it and keep the system healthy. When the blood becomes infected with catarrhal matter it is not able to furnish the required amount of healthful properties, but feeds the parts with impurities which disease the membranes and tissues so that they become irritated and inflamed, and Catarrh, with all its disagreeable and dangerous symptoms, is established in the system. There is a constant ringing in the ears, a thin, watery discharge from the nostrils, the breath has an offensive odor, slight fever often accompanies the disease, and gradually the entire health becomes affected and the system upset and deranged. In its earlier stages, when Catarrh is confined to the nose and throat, sprays, washes, inhalations, etc., are soothing and in a way beneficial, because they are cleanly and usually antiseptic, but such treatment has no curative effect, because it does not reach the blood. To cure Catarrh the blood must be purified, and this is just what S. S. S. does. It goes down into the circulation and attacks the disease at its foundation; it removes the cause and makes the blood pure and healthy. Then the blood vessels are filled with fresh, reinvigorated blood, which is carried to all the mucous surfaces and linings, the inflammation and irritation are corrected, the symptoms all disappear, the health is improved and Catarrh is permanently cured. Book on Catarrh and any medical advice free to all who write.

NEW SILVER MINE NEAR WICKENBURG

New Strike on the Old Gonzales Property Which Will be Exploited by Jennings Brothers.

A. H. Jennings who with his brother Oscar has been mining in the Wickenburg district for the last six years is in town visiting the fair. He brings along in his pockets some samples of a rich strike recently made on a property they have bonded and which they propose to develop with a company now in process of organization. They have gold properties beside but this is a silver mine and bids fair at this time to be a bonanza. No better description of the property can be given in the same space than the following which appeared in the last issue of the Wickenburg Miner.

For the past few years the mining world has been looking with longing eyes toward wealth derived from gold and copper mines, as far as this section is concerned, and comparatively few have been giving silver much thought and still fewer know that in the heart of one of the best gold and silver districts in the country is a veritable silver mine. The Jennings brothers have bonded the old Gonzales property, formerly known as the Monto Christo, from which Gonzales and his associates have taken several thousand dollars from no greater depth than 60 feet, and the development accomplished since by them shows that the vein is continuous, the thickness being uniform and the pay streak running from three inches to two feet from the surface to the bottom of the 175 foot shaft. The Mine man dug out some pieces of native silver, and several other pieces of ore held together with wires of silver. These came from the bottom of the shaft and will run as much as 14,000 ounces to the ton.

From several other old workings considerable ore has been shipped, and a great amount of shipping ore is now in sight. Gonzales shipped a car of second class ore from one of the shafts that averaged \$35 per ton net.

Values in the pay streak runs from 300 ounces to 14,000 ounces per ton. \$15,000 in nugget silver has been taken from the gulch below the old workings, and it looks as though the Jennings brothers were about to open up another Silver King. It is their intention to incorporate on some valuable claims nearby, and the new company will take over the bond on the silver mine. They have already spent considerable money in development work and equipment, and have decided that it will be necessary to call in the assistance of outside capital in order to keep up development and equip with heavier machinery, as the small hoist now in use will not be available beyond 300 feet in depth.

Ore is now being sacked for shipment, there being a considerable proportion of it worth 50 cents per pound. There are three parallel ledges on the property, each with a different dip, the indications being that all will come together at depth. There are also three

distinct cross ledges running through the claims, making a net work of mineralized veins bearing gold, silver and copper.

It seems to be the general opinion that southern Yavapai county will be able to claim one of the best silver mines in the country, and by the way, the new company will be named the Yavapai Silver Mines company, the property being located in Black Rock district, already noted for its extremely promising prospects. The silver mines are adjoining the Amethyst group, owned by Cochrane and Murphy, and which give promise of making one of the future mines of the district. The Black Rock mines is also a neighbor to the silver mine.
